

nutriflo[®] Casting

A non-pesticidal, plant nutrient based liquid that improves turf health and amends the local soil surface environment in areas facing the negative consequences from excessive surface casting.

Application Type Application Rate per Hectare

1st application of the season (Sept – March) 20 L/ha in 250–400 L of water
Re-apply fortnightly if problem re-occurs 10 L/ha in 250–400 L of water

*Sand based rootzones may require more frequent application; suggest 10 day intervals.
Allow 2–3 days from application to begin to see the benefits of reduction in surface casts.

PLEASE NOTE: Casting is a cultural soil amendment and not a fertiliser. As such it should always be used as part of a standard fertility program. Always read and follow label instructions.

Analysis Breakdown

Specific Gravity 1.15

Nutrient	% w/w
Total Nitrogen	5.10
Ammoniacal N	5.10
Sulphur (S)	5.77
Sulphur Trioxide (SO ₃)	14.40
Calcium (Ca)	0.03
Copper (Cu)	0.000
Iron (Fe)	0.280
